PROJECTS

1. SQL-Based Management System

Worked on the backend development of a CRM system designed for mental health management, aimed at efficiently handling patient information, therapy sessions, and clinical records in a secure and organized manner. The system was developed with a strong focus on data structure, relational database design, and backend logic.

2. Java Library Management

Developed a Library Management System using Java in Eclipse with JavaFX and Scene Builder for building the graphical user interface. The application was designed to efficiently manage library operations through a clean and user-friendly desktop interface.
